
Drugs + Your Body

Drugs are chemicals or substances that change the way our bodies work. When you put them into your body (often by swallowing, inhaling, or injecting them), drugs find their way into your bloodstream and are transported to parts of your body, such as your brain. In the brain, drugs may either intensify or dull your senses, alter your sense of alertness, and sometimes decrease physical pain.

Assignment:

Part 1:

Read the following article in it's entirety

[Drugs + Your Body](#)

Part 2:

2. After reading this article, complete the worksheet

[Alcohol + Drugs = Magnified Effects](#)
